FY2026 Forecast – Management Insights	
Revenue Growth	***FY2026 revenue is expected to increase by 6.42% compared with FY2025. This shows that the company is expected to continue growing, although the growth is moderate.***
Profitability	*EBIT is expected to increase by* ***4.20%*** *, while net profit is expected to increase by* ***3.75%*** *. Profit is growing, but slightly slower than revenue, which suggests that expenses are putting some pressure on profitability.*
Receivables	*Trade receivables are expected to increase by* ***2.77%*** *. This means more money may remain with customers at the end of the year. The company should keep an eye on collections to make sure customers are paying on time.*
Payables	*Trade payables are expected to increase by* ***20.21%*** *. This helps the company's cash position because more payments to suppliers remain outstanding. However, the increase should be monitored to make sure it does not create problems with suppliers.*
Operating Working Capital	Operating working capital is expected to decrease by **₹1,345.97 crore**. This is positive for cash flow because less money will be tied up in day-to-day operations.
Operating Cash Flow	Operating cash flow is expected to increase by 17.68% to ₹57,553.57 crore. This shows that the company is expected to generate more cash from its normal operations.
Free Cash Flow	Free cash flow is expected to increase by 19.89% to ₹54,007.98 crore. This is a positive sign because the company is expected to have more cash available after spending on capital expenditure.
Overall Interpretation	***Overall, the FY2026 forecast looks positive. Revenue and profit are expected to grow, while operating and free cash flow are expected to improve. The company has historically maintained strong liquidity, very low leverage and strong interest coverage. Although receivables are expected to increase, the overall operating working capital position improves and supports cash flow. The main areas to watch are the slight pressure on profit margins, customer collections and the increase in trade payables.***
